

【X431 Function】 Citroen sega oil maintenance lamp to zero operation method

The interior view of the Citroen sega is shown in figure 1. The instrument is in the middle position.

Operation Procedure:

1. Switch off the ignition;
2. Hold down the bottom of the instrument and the zero button TRIP should not be released, as shown in figure 2;
3. Switch on the ignition;
4. Continue to hold down the zero button TRIP, and when the display is reduced to "0" from "10", notice that the TRIP button is released when the maintenance wrench disappears;
5. Close the ignition switch and reset to zero reset.
6. After the operation is completed, wait for 5 minutes to ensure that the zeros are fully stored.
